Hi Zeyad,

The Task is:

An API feed as json:

```
{

  "result": [

    {

      "name": "Test Name 1",

      "id": 21000,

        "type": "one",

      "Content": <content xmlns:xlink=\"http://www.w3.org/1999/xlink\"><strapline>This is Strapline</strapline><headline><bold>This is Main Heading</bold></headline><body><paragraph>this is Subtitle</paragraph></body><pos1><picture alt-text=\"\" seo-title=\"\" xlink:href=\"https://qr1.at/img/webhook.png"/><headline><bold>Section 1:</bold></headline><subline>section subtitle</subline><body><bullet-list><item><paragraph>first bullet point</paragraph></item><item><paragraph>2nd bullet point</paragraph></item></bullet-list></body></pos1></content>"

    },

    {

      "name": "Test Name 2",

      "id": 21001,

      "type": "two",

      "Content": "leben"

    },

  ],
```

```
    "count": 2,

    "total-count": 2,

}
```

In Controller just store this feed as variable **$feedContent**

Check in a condition If in the Feed key "type" is "one" then transform the "Content" value of that record to this below format and display in vue template:

This is Strapline

This is Main Heading

this is Subtitle

Section 1:

section subtitle

- first bullet point
- 2nd bullet point

Let me know if you have any questions.

All the best 😊

Regards,

Bushra
